# Mobile Computing Solutions

## Introduction

Intelligent technology is perhaps one of the trendiest topics in the current IT world. And as technologies continue to mature, more and more applications become candidates for getting an “intelligent” facelift, while existing ones build on their offerings for more sophisticated features that were once deemed “impossible” to accomplish.

Mobile Computing has come a long way since the invention of the first portable computer and with the introduction of 3G and 4G networks in the 21st century, it has gained much prominence in almost every aspect of our lives. As their deployment expands, the tasks of making them conducive for outdoor use and reinforcing them to withstand the harshest environments, such as battlefields, warehouses and in-vehicle applications, it becomes imminent, the ushering in of “Mobile Computing Solutions”.

### Military

As the battlefield (theater) goes electronic and increasingly mobile, cumbersome electronic setups are no longer applicable, which can occur anywhere from urban areas to the desert, calling for a new class of ruggedly built mobile computing systems.

With MIL-STD-810G-compliant, IP65-rated enclosures, the sturdy RTC-1000, RTC-900 and RTC-700 rugged tablet series deliver the strength and durability needed for rough handlings in these hostile environments. Its sunlight readable, Gorilla Glass screens, ranging from 7" to 10.2", provide the perfect display solution out in the field. Select models offer CAC Reader option.

In addition, with various communication features such as GPS, WiFi, Bluetooth, and 3G/4G, these tablets are ideally suited for real-time command and control applications.

# Field Service

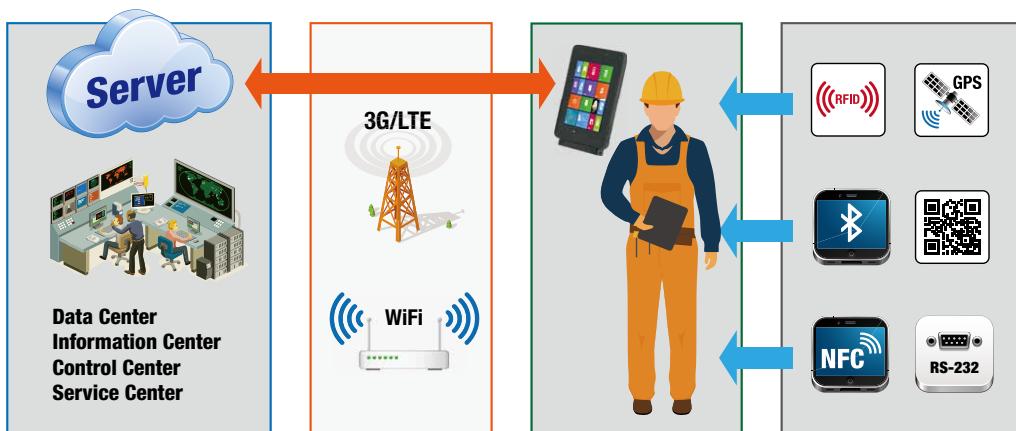

## Field Service

One of the tasks that benefit greatly from the advent of mobile computing and telecommunication technologies is field inspection, a nearly outdoor-exclusive task.

Commonly deployed for field work, the RTC-600 and RTC-700 rugged tablet series offer all-important sunlight readable screens, enabling contents to be read even under the brightest sun conditions. The enclosures are also rated IP65 to ensure that dust, sand and water, elements most commonly encountered during field work, do not intrude and damage the devices.

These Industrial grade tablets include features such as E-Compass, GPS and 3G/4G connectivity, so that orientation can be quickly identified for both positioning and land surveying purposes. In addition, the device's 5MP camera further supports photographic and video capabilities for high-resolution data capture.

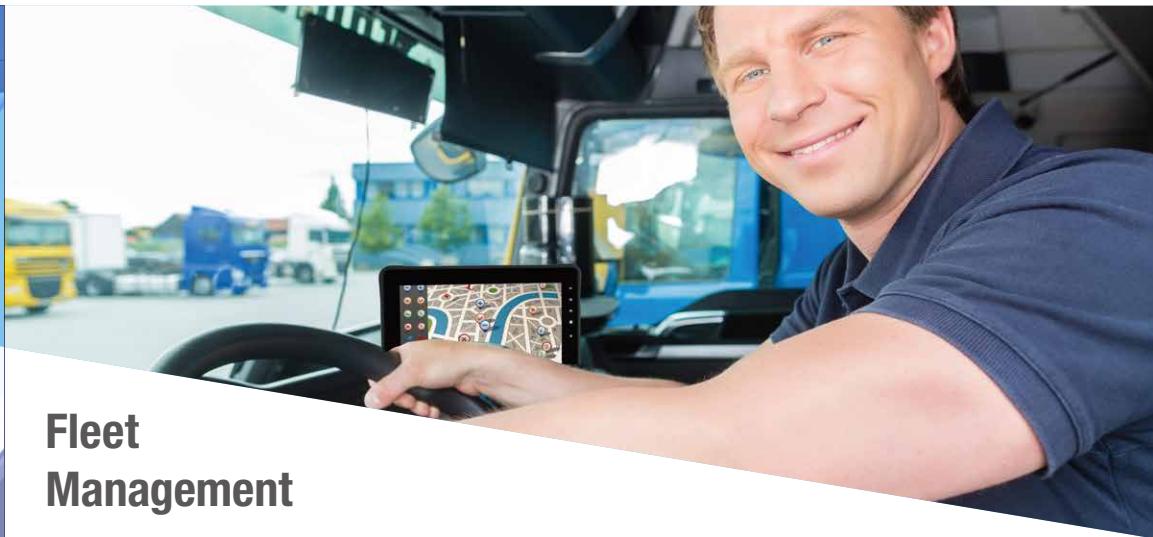

# Fleet Management

## Requirements

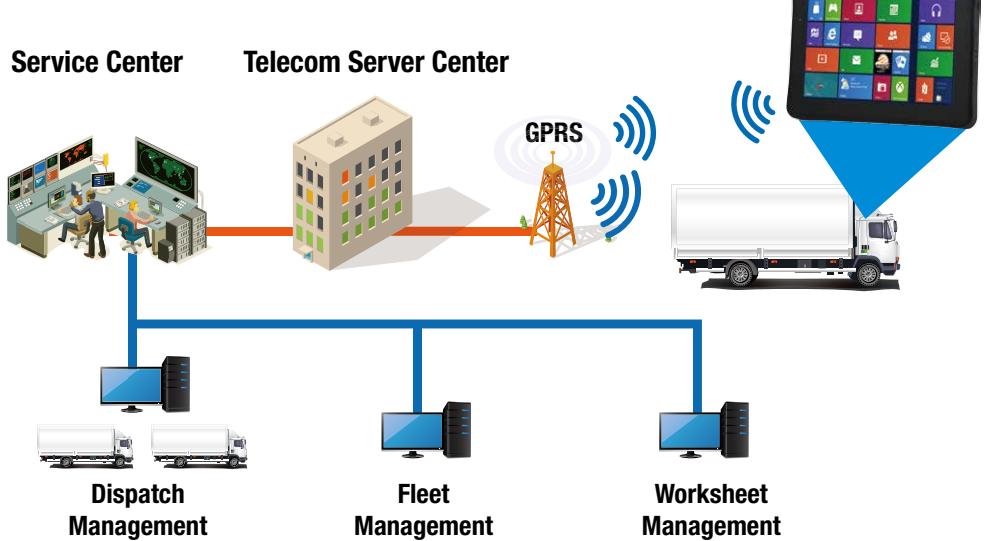

- Sunlight readable screens
- Vibration resistant
- Excellent wireless communications
- Voltage-tolerant for vehicle electrical supply

## Fleet Management

Today, as computing intelligence migrates into the in-vehicle space, it is vital for hardware to adapt to the ever-changing in-vehicle conditions to promote better routing for the fleets utilizing these computer systems.

MIL-STD-810G-compliant, the RTC-700 and RTC-900 rugged tablet series are built sturdy to withstand shock and vibration during any road trip condition. They are also equipped with a wide array of wireless technologies, such as 3G/4G, WiFi, Bluetooth® and GPS, for instantaneous communications and positioning, allowing real-time management of fleets and re-routing of vehicles by the control center. Drivers can also upload and retrieve information pertaining to their tasks, on the fly.

# Law Enforcement

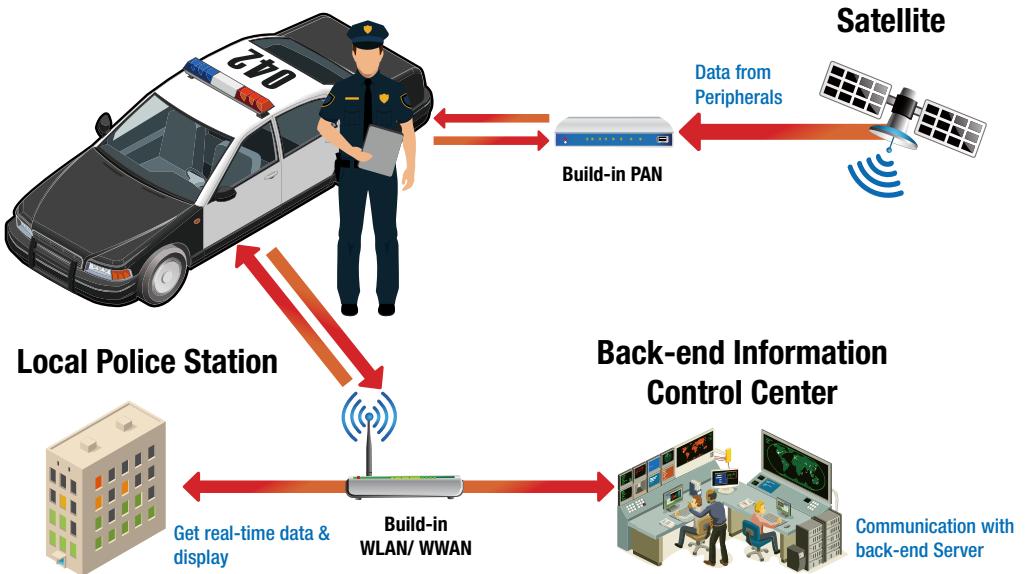

## Law Enforcement

Keeping a city free of crime is the duty of every law enforcement agency. To accomplish this, not only do these agencies need a strong team of officers and law enforcement personnel, but also an equally tough set of hardware solutions.

The RTC-600, RTC-700 and RTC-900 rugged tablet series feature many rugged characteristics for common deployment and strength against adverse weather and rough handling, including sunlight readable displays, Gorilla Glass screens ranging from 5.7" to 10.1", IP65 rated enclosures and swappable batteries capable of lasting up to 8 hours.

In addition, with WiFi, 3G/4G, Bluetooth® and GPS capabilities, wireless communication with police headquarters can easily be established for instant data transfer, vehicle positioning, expediting critical investigations and daily law enforcement.

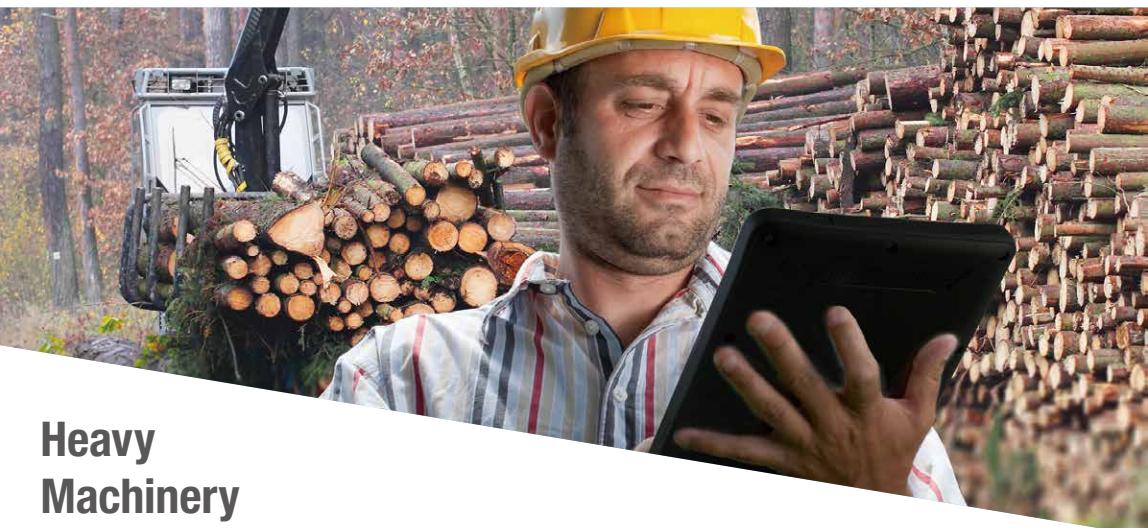

## Requirements

- Sunlight readable screens
- Vibration/ water resistant
- Excellent wireless communications
- Long battery life
- Lightweight

## Heavy Machinery

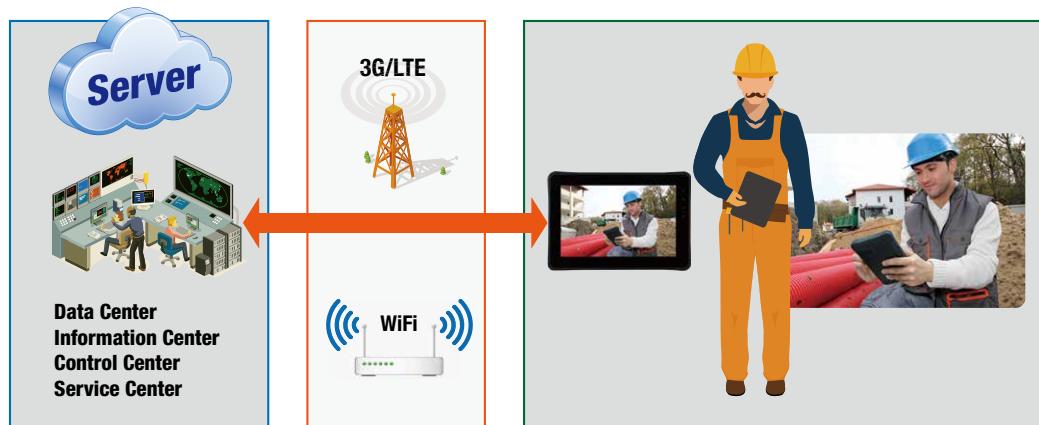

### Heavy Machinery

For applications associated with heavy machinery, such as excavators and farming equipment, more than ruggedness, mobile devices need functions and intricacies that provide a complete solution to problems commonly associated with such machinery.

Equipped with IP54 and IP65-rated enclosures, the RTC-1000, RTC-900 and RTC-700 rugged tablet series are well-protected against sand, dust and water, elements prevalent in construction sites where most heavy equipment is deployed. Touchscreens in sizes ranging from 7" to 10.2" with AOT™ (Advanced Optibond Technology) and sunlight readable technology offer improved display under extreme lighting conditions. A variety of wireless options (3G/ 4G/ WiFi/ Bluetooth®/ GPS) are also available for instantaneous communications.

For the RTC-1000i series, mechanical controls are also featured with programmable buttons and a stylus, allowing users with gloves or other protective garments on to operate the device without removing them.

# Warehousing

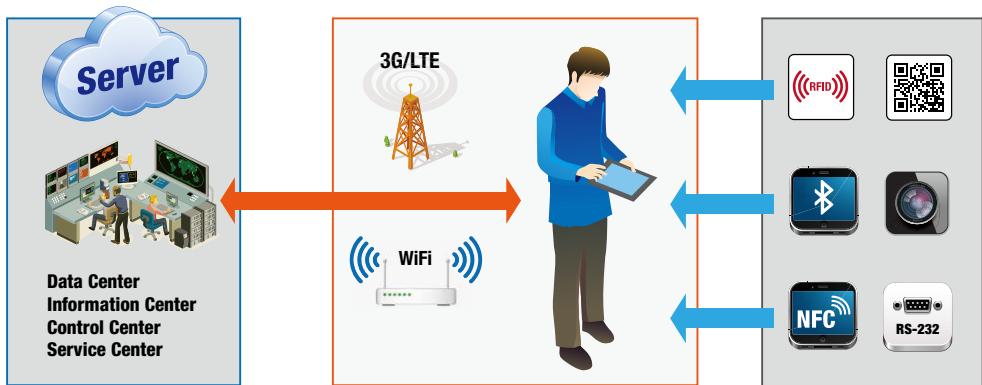

## Warehousing

Keeping a warehouse organized is no easy task. But with the introduction of information and mobile technologies, integrating tablets with computer systems for real-time data capture is now nothing more than a few taps on a screen.

Built to withstand dusty warehouse environments, the RTC-600 and RTC-700 rugged tablet series utilize IP65-rated enclosures that prevent both solid and liquid intrusion. In addition, they are MIL-STD-810G-compliant for resistance against shock and vibration, providing protection against accidental drops and other mishandlings.

The tablets are further supported with a variety of accessories ideally suited for managing inventories, such as barcode scanners for instant information retrieval. The tablets also incorporate built-in high resolution cameras for visual identification, when required. Captured information can then be sent wirelessly via WiFi, 3G/4G, GPS and Bluetooth® to the control center for further processing.

## E-POS

## E-POS

Besides fast and flexible software, it is also crucial that the weight, level of ruggedness, long-term usability and battery life of a mobile device meet certain requirements in order to be qualified for POS usage applications.

Weighing in at no more than 0.6kg, the RTC-700 rugged tablet series equips a sunlight readable 5.7" Gorilla Glass screen to prepare it for all lighting conditions and rough handling, while its IP65-rated enclosure protects it from intrusion of small foreign objects or agents, likely to occur in restaurants and eateries.

The device is also designed with a swappable battery and an external docking station, increasing battery life and mobility. In addition, along with wireless connectivity, there are a variety of accessories, including a barcode scanner and a magnetic stripe reader for expanded applications.

## Requirements

- Accelerates service time
- Sunlight readable screens
- Customizable apps for menus, communications, etc
- Vibration/ water resistant
- Excellent wireless communications
- Lightweight
- Accessories for expanded functionalities

# E-Ticketing

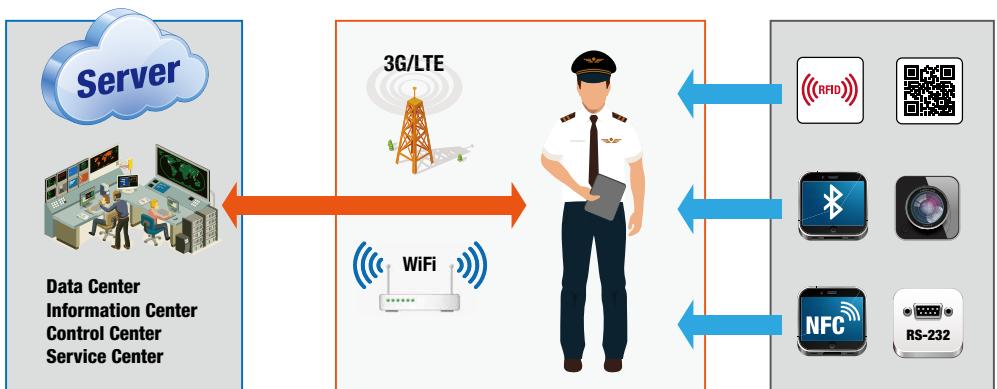

## E-Ticketing

From train conductors to police officers, the issuing and checking of tickets are no longer a tedious and manual affair. Using mobile technology, these tasks have become faster and easier while greatly reducing room for error.

Built for ruggedness and mobility, the lightweight RTC-600 and RTC-700 tablet series equip 5.7" and 7" Gorilla Glass touchscreens respectively and IP65-rated enclosures that prepare and protect the devices from rough handling and foreign object intrusion. Furthermore, all devices are MIL-STD-810G compliant for protection against vibration-prone environments, such as in-vehicle applications.

With support for WiFi, 3G/4G, GPS and Bluetooth®, instant data upload and retrieval, paramount in train conductor and police work, is possible. The devices are also compatible with a variety of optional accessories, such as docking stations and barcode readers to further enhance its functionality. For example, train tickets can be checked in a matter of seconds via barcode scanner.
