

EMI Suppression Filters (Lead Type EMIFIL®)

for EU RoHS Compliant

- All the products in this catalog comply with EU RoHS.
- EU RoHS is "the European Directive 2002/95/EC on the Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment".
- For more details, please refer to our website 'Murata's Approach for EU RoHS' (<http://www.murata.com/info/rohs.html>).

Outline of EMI Suppression Filters (EMIFIL®) for DC Line

● Ferrite Bead Inductor

- Chip Ferrite Beads are effective for frequencies ranging from a few MHz to a few GHz. Chip Ferrite Beads are widely used as a low noise countermeasure, as well as a universal noise suppression component.
- Chip Ferrite Beads produce a micro inductance in the low frequency range. At high frequencies, however, the resistive component of the inductor produces the primary impedance. When inserted in series in the noise producing circuit, the resistive impedance of the inductor prevents noise propagation.

Outline of EMI Suppression Filters (EMIFIL®) for DC Line

● Disc Type EMIFIL®

Disc Type EMIFIL®p.12-20

- This capacitor type EMI suppression filter has a large noise suppression effect at frequencies ranging from a few MHz to hundreds of MHz. This type of filter is used widely as a universal, high performance EMI suppression component.
- Three terminal construction reduces residual inductance, thereby substantially improving noise suppression at frequencies over 10MHz.

Comparison of Insertion Loss Characteristics

A three terminal capacitor has a higher self resonance frequency than a general two terminal type and exhibits effective noise suppression at high frequency.

Outline of EMI Suppression Filters (EMIFIL®) for DC Line

● EMIGUARD®

- EMIGUARD® eliminates both surge noises and EMI noises due to its dielectric varistor material.
- Effective when high frequency noise and high voltage surge suppression are required, and also in situations when surging starts at extremely high speeds. This type of surging cannot be eliminated with general type varistors.

■ Surge Absorption Effect of EMIGUARD®

Type of Filter	Surge Absorption Effect of EMIGUARD®
No filter	
Three terminal capacitor is used to suppress the surge.	
EMIGUARD® is used to suppress the surge. (VFS6V)	

Outline of EMI Suppression Filters (EMIFIL[®]) for DC Line

● Common Mode Choke Coil

Common Mode Choke Coilp.30

PLT09H

- These choke coils reduce common mode noise, which causes problems on balanced transmission lines, and are effective against common mode noise in the several MHz to several 100MHz frequency range. They are ideally suited for noise suppression on DC power supply lines and interface cables.

Construction of Common Mode Choke Coil

EMI Suppression Filters (Lead Type EMIFIL®)

Ferrite Beads Inductors BL01/02/03 Series

1

BL01/BL02/BL03 Series

■ Features

BL01/02/03 series are ferrite beads with lead wires to produce a high frequency loss for suppression of noise. Simple construction and easy-to-use, effective for low impedance circuits such as power supplies and grounds. Effective also for preventing overshoot and undershoot of digital signal in clocks or the like, and suppressing the higher harmonic wave. Suitable for prevention of abnormal oscillation at high frequency amplifying circuit.

■ Insertion Loss Characteristics

EMI Suppression Filters (Lead Type EMIFIL®)

Disc Type EMIFIL® Broad Band Type DSN9/DSS9/DST9 Series

■ Features

DS_9 is a basic type EMI suppression filter which can obtain high insertion loss in a wide frequency range. Its three terminal structure enables precise high frequency performance. DSS9NP32A222/DSS9NT31H223 are low distortion types for audio circuits.

■ Supplement

Diameter of lead is 0.6mm for taping type.
 Taping type is three terminal in-line arrangement.

*1 Coating extending on leads does not exceed the tangent line. Exposed electrode, if any, is covered by solder, etc.
 *2 There should not be the exposure of the ferrite bead if a hole is in top of filter, the ferrite bead should not be exposed.

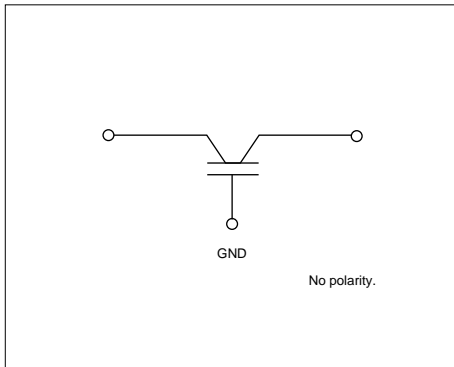

DSN9 Series

■ Insertion Loss Characteristics

EMI Suppression Filters (Lead Type EMIFIL®)

Disc Type EMIFIL® Heavy-duty Type DSN9H/DSS9H/DST9H Series

■ Features

DS_9H is a basic type EMI suppression filter which can obtain high insertion loss in a wide frequency range. Its three terminal structure enables nice high frequency performance. High rated voltage of 250Vdc and wide operating temperature range from -40 degrees C to 105 degrees C are suitable for high reliability circuits.

2

■ Supplement

Diameter of lead is 0.6mm for taping type.
Taping type is three terminal in-line arrangement.

*1 Coating extending on leads does not exceed the tangent line. Exposed electrode, if any, is covered by solder, etc.
 *2 There should not be the exposure of the ferrite bead if a hole is in top of filter, the ferrite bead should not be exposed.

EMI Suppression Filters (Lead Type EMIFIL®)

EMIGUARD® (EMIFIL® with Varistor Function) VFR3V/VFS6V/VFS9V Series

for Semiconductor Protection VFR3V Series

■ Features

VFR3V series is designed for ESD surge protection of IC. It efficiently absorbs ESD surges rushed into IC's I/O terminal.

■ Applications

Elimination of noise and protection of semiconductors in office equipment, including computers and peripheral equipment, copy machines, and communication terminals.

Part Number	Rated Voltage (Vdc)	Varistor Voltage (Vdc)	Capacitance (pF)	Rated Current (mA)	Peak Pulse Current (A)	Operating Temperature Range (°C)
VFR3VD31E131	25	50 +20%, -20%	130 +20%, -20%	20	30	-25 to 85

Please refer to Part Numbering for Type and Length of Lead.

■ Insertion Loss Characteristics

for Signal Line VFS6V Series

■ Features

VFS6V series is designed for surge protection of signal line. It protects electric circuit from surges such as static electricity and suppresses EMI noise. Built-in ferrite bead gives excellent EMI suppression.

■ Applications

Elimination of noise and protection of electric circuits in office equipment, including computers and peripheral equipment, copy machines, and communication terminals.

Part Number	Rated Voltage (Vdc)	Varistor Voltage (Vdc)	Capacitance (pF)	Rated Current (A)	Peak Pulse Current (A)	Operating Temperature Range (°C)
VFS6VD81E221	25	50 +20%, -20%	220 +20%, -20%	6	100	-40 to 105

Please refer to Part Numbering for Type and Length of Lead.

■ Equivalent Circuit

■ Insertion Loss Characteristics

for Large Current VFS9V Series

■ Features

VFS9V series is designed for surge protection of the power supply. It protects electric circuits from surge such as static electricity and suppresses EMI noise. Its large capacitance value enables high insertion loss for EMI noise.

■ Applications

For circuit protection and noise suppression in electronics equipment such as computers and DC motors, and in electronics systems installed in cars such as car audio equipment and engine controllers.

■ Supplement

Diameter of lead is 0.6mm for taping type.
Taping type is three terminal in-line arrangement.

VFS9V Series

*1 Coating extending on leads does not exceed the tangent line. Exposed electrode, if any, is covered by solder, etc.
 *2 If there is a hole in the top of the filter, the ferrite bead should not be exposed.

Part Number	Rated Voltage (Vdc)	Varistor Voltage (Vdc)	Capacitance (pF)	Rated Current (A)	Operating Temperature Range (°C)
VFS9VD31B223	12	22 +20%,-20%	22000 +50%,-20%	7	-40 to 100

Rated current is 7A for bulk type and 6A for taping type.
 Rated current of taping type is 6A because diameter of lead is 0.6mm and its lead layout is in-line type.
 Please refer to Part Numbering for Type and Length of Lead.

■ Insertion Loss Characteristics

■ Voltage - Current Characteristics

Noise Suppression Effect of VFR/VFS Series

■ Example of IC Protection (VFR3V)

● Testing Method

1. Put ESD surge to IC (7404 family) input terminal with ESD simulator based on IEC 801-2.
2. Check IC's operation.
3. If IC's operation is normal, increase ESD voltage in 1kV steps.
4. Continue above steps 1 to 3 till IC's operation becomes abnormal.

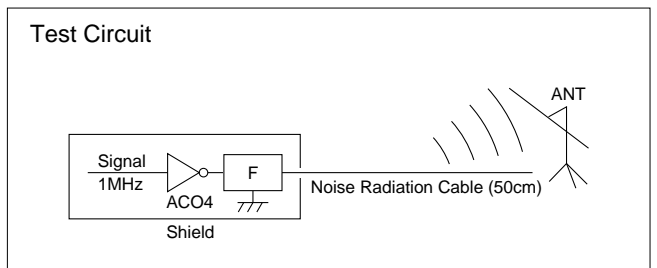

● Result

Varistor VFR3V can protect IC from ESD.

Overload	1.4 times the varistor voltage (V_1) is applied for 5 minutes at room temperature.	<table border="1"> <thead> <tr> <th>Items</th> <th>Specifications</th> </tr> </thead> <tbody> <tr> <td>Rated Capacitance Change</td> <td>Within±15%</td> </tr> <tr> <td>Insulation Resistance</td> <td>500kΩ min.</td> </tr> <tr> <td>Rated of Change in Varistor Voltage V_1^*</td> <td>Within±15%</td> </tr> <tr> <td>Voltage Rate</td> <td>1.30 max.</td> </tr> </tbody> </table> <p>*V_1: Voltage when 1mA is applied</p>	Items	Specifications	Rated Capacitance Change	Within±15%	Insulation Resistance	500kΩ min.	Rated of Change in Varistor Voltage V_1^*	Within±15%	Voltage Rate	1.30 max.
Items	Specifications											
Rated Capacitance Change	Within±15%											
Insulation Resistance	500kΩ min.											
Rated of Change in Varistor Voltage V_1^*	Within±15%											
Voltage Rate	1.30 max.											
Surge Test (1)	At room temperature. Surges are applied are 10^5 times every 2 seconds. Then after 1 or 2 hours, the sample is measured.											
Surge Test (2)	At room temperature. Capacitor "C" is charged with 70V, then discharged to apply the voltage to the sample. Tested once (resuming JASO A-1).											
High Temperature Load	At a temperature of $85\pm 3^\circ\text{C}$, the varistor voltage V_1 is continuously applied to the sample for 1000 to 1024 hours. Then it is left at room temperature, for 4 to 24 hours before measuring.											

■Pulse-Voltage Breakdown Characteristic (VFS9V)

VFS9V EMIGUARD® use a self healing varistor- capacitor, so that it can be used under a 500 to 600V surge which would break conventional disc type EMI filters. As shown in figure below EMIGUARD® withstands 2000V impulses applied 1000 times.

■Temperature Characteristics of Varistor Voltage - Insulation Resistance (VFS9V)

Continued on the following page. ↗

Noise Suppression Effect of VFR/VFS Series

Continued from the preceding page.

■ Noise Absorption Effect of EMIGUARD® (VFS9V)

Type of Filter	EMI Suppression Effect	Description
without EMIGUARD®		Waveform when EMIGUARD® is not used. (Surge from a noise simulator)
with EMIGUARD® 		Waveform after the noise passed through EMIGUARD®. Little noise is recorded.

3

■ Comparative Data (VFS9V)

1. Absorption of quick-rising, high-frequency noise (10ns/div, 100V/div)

Type of Filter	EMI Suppression Effect	Description
without Filters		
Conventional varistor 		As with the two terminal capacitor
Two terminal capacitor (with varistor function) 		The two terminal capacitor is influenced by lead line inductance, leaving behind some of the rising and falling edges. The residual noise can cause the system to malfunction.
VFS9V 		The three terminal structure eliminates most of the lead line inductance. This allows VFS9V to completely absorb the rising and falling edges of the applied pulses.

Continued on the following page. ↗

Noise Suppression Effect of VFR/VFS Series

Continued from the preceding page.

2. Absorption of wide-pulse noise (50ns/div, 200V/div)

Type of Filter	EMI Suppression Effect	Description
without Filters	 <p>Noise wave applied</p>	
Two terminal capacitor		In capacitors the voltage of the residual surge (1300V) is higher than that of the above example. The wave height is almost the same as the original.
Three terminal capacitor (with ferrite bead)		Conventional EMI filters do not work for wide-pulse noise because capacitors are saturated. In this example, the residual 1200V surge can cause the system to breakdown.
VFS9V		Bypassing the high voltage to the ground, voltage can be suppressed.

N	General Use

⑨ Packaging

Code	Packaging	Series
B	Bulk	All series

⑤ Inductance

Expressed by three figures. The unit is micro-henry (μH). The first and second figures are significant digits, and the third figure expresses the number of zeros which follow the two figures.

⑥ Rated Current

Expressed by three-digit alphanumerics. The unit is in amperes (A). A decimal point is expressed by the capital letter "R". In this case, all figures are significant digits.

EMI Suppression Filters (Lead Type EMIFIL®)

Common Mode Choke Coils (for DC Line) PLT09H Series

PLT09H series is a common mode choke coil for DC lines. It is effective against the common mode noise that can cause radiative noise in power supply lines and interface lines. The additional normal mode inductance enables high suppression effect to radiation noise.

■ Features

1. This is a wide frequency range type, applicable in applications ranging from a few MHz to several 100MHz.
2. It features a low-profile design.

■ Applications

1. Noise suppression of SW power supply, DC-DC converter
2. DC power lines in AC adapter of Portable equipment

PLT09H Series

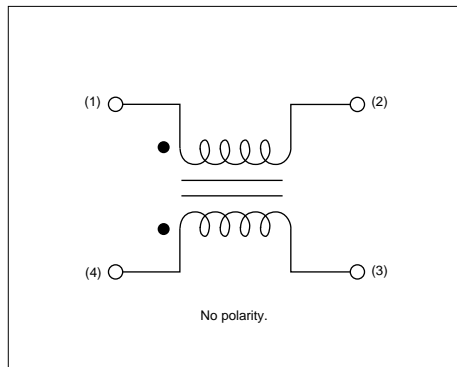

(in mm)

Part Number	Inductance(min.) (μH)	Rated Current (A)	Rated Voltage (Vdc)	Withstand Voltage (Vdc)
PLT09HN2003R0P1	20 min.	3	50	125

Operating Temperature Range: -40°C to 85°C

⚠ Caution/Notice

■ ⚠ Caution (Rating)

Do not use products beyond the rated current and rated voltage as this may create excessive heat and deteriorate the insulation resistance.

■ ⚠ Caution (Soldering and Mounting)

Mounting holes should be designed as specified in these specifications. Other designs than shown in these specifications may cause cracks in ceramics which may lead to smoking or firing.

■ Notice (Storage and Operating Conditions)

<Operating Environment>

1. Do not use products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.
2. Do not use products near water, oil or organic solvents. Avoid environment where dust or dirt may adhere to product.

<Concerning EMIGUARD®>

VFR3V series is designed only to absorb electrostatic surges. Do not use this product to absorb large energy surges such as lighting or switching related surges.

<Storage and Handling Requirements>

1. Storage Period

Used the products within 12 months after delivery.
Solderability should be checked if this period is exceeded.

■ Notice (Soldering and Mounting)

1. Washing

Failure and degradation of a product are caused by the washing method. When you wash in conditions that are not in mounting information, please contact Murata engineering.

2. Soldering

Reliability decreases with improper soldering methods. Please solder by the standard soldering conditions shown in mounting information.

2. Storage Conditions

- (1) Storage temperature: -10 to 40 degrees C

Relative humidity: 30 to 70%

Avoid sudden changes in temperature and humidity.

- (2) Do not store products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

- (3) When restoring taping type (BL01RN1A1F1J), please attach the Spacer between flanges of reel. The Spacer is corrugated paper which is attached when shipping.

3. Other

Noise suppression levels resulting from Murata's EMI suppression filters EMIFIL® may vary, depending on the circuits and ICs used, type of noise, mounting pattern, lead wire length, mounting location, and other operating conditions. Be sure to check and confirm in advance the noise suppression effect of each filter, in actual circuits, etc. before applying the filter in a commercial-purpose equipment design.

Soldering and Mounting

1. Mounting Hole

Mounting holes should be designed as specified below.

Part Number	Bulk Type (in mm)	Taping Type (in mm)
DSN6 DSS6 VFR3V VFS6V		
DSN9 DSN9H		
DST9 DST9H		
DSS9 DSS9H VFS9V		

2. Using EMIGUARD® effectively

- (1) Terminal (with mark) should be properly connected to the line of incoming electrostatic surge. (There is polarity.) Otherwise, no effect in ESD suppression can be expected (VFR3V).
- (2) Products should be used at rated voltage or less and rated current or less.
- (3) Products should not be applied for the absorption of surges which have large energy (ex. induced lightning surges, switching surges) because it is designed for the absorption of electrostatic surges (VFR3V).
- (4) Electrostatic test should be done on the following conditions (VFR3V).

$$n \cdot [C / R \cdot V^2]^2 < 8.0 \times 10^5$$

n: Times applied

C: Charging Capacitance (pF)

V: Testing Voltage (kV)

R: Charging Resistance (Ω)

Continued on the following page. 

Soldering and Mounting

☐ Continued from the preceding page.

3. Soldering

- (1) Use Sn-3.0Ag-0.5Cu solder.
- (2) Use Rosin-based flux. Do not use strong acidic flux with halide content exceeding 0.2wt% (chlorine conversion value).
- (3) Products and the leads should not be subjected to any mechanical stress during the soldering process, or while subjected to the equivalent high temperatures.
- (4) Standard flow soldering profile

4. Cleaning Conditions

Do not clean VFR3V, PLT09H and VFS6V series.
 Clean other parts in the following conditions.

- (1) Cleaning temperature should be limited to 60°C max. (40°C max for alcohol type cleaner).
- (2) Ultrasonic cleaning should comply with the following conditions, avoiding the resonance phenomenon at the mounted products and P.C.B.
 Power: 20 W / ℓ max. Frequency: 28 to 40kHz
 Time: 5 min. max.
- (3) Cleaner
 - (a) Alcohol type cleaner
 Isopropyl alcohol (IPA)

(b) Aqueous agent (PLT series cannot be cleaned)
 PINE ALPHA ST-100S

- (4) There should be no residual flux or residual cleaner left after cleaning.
 In the case of using aqueous agent, products should be dried completely after rinsing with de-ionized water in order to remove the cleaner.
- (5) The surface of products may become dirty after cleaning, but there is no deterioration on mechanical, electrical characteristics and reliability.
- (6) Other cleaning: Please contact us.

△Note:

1. Export Control

<For customers outside Japan>

No Murata products should be used or sold, through any channels, for use in the design, development, production, utilization, maintenance or operation of, or otherwise contribution to (1) any weapons (Weapons of Mass Destruction [nuclear, chemical or biological weapons or missiles] or conventional weapons) or (2) goods or systems specially designed or intended for military end-use or utilization by military end-users.

<For customers in Japan>

For products which are controlled items subject to the "Foreign Exchange and Foreign Trade Law" of Japan, the export license specified by the law is required for export.

2. Please contact our sales representatives or product engineers before using the products in this catalog for the applications listed below, which require especially high reliability for the prevention of defects which might directly damage a third party's life, body or property, or when one of our products is intended for use in applications other than those specified in this catalog.

- | | |
|-----------------------------|--|
| ① Aircraft equipment | ② Aerospace equipment |
| ③ Undersea equipment | ④ Power plant equipment |
| ⑤ Medical equipment | ⑥ Transportation equipment (vehicles, trains, ships, etc.) |
| ⑦ Traffic signal equipment | ⑧ Disaster prevention / crime prevention equipment |
| ⑨ Data-processing equipment | ⑩ Application of similar complexity and/or reliability requirements to the applications listed above |

3. Product specifications in this catalog are as of January 2009. They are subject to change or our products in it may be discontinued without advance notice. Please check with our sales representatives or product engineers before ordering. If there are any questions, please contact our sales representatives or product engineers.

4. Please read rating and △ CAUTION (for storage, operating, rating, soldering, mounting and handling) in this catalog to prevent smoking and/or burning, etc.

5. This catalog has only typical specifications because there is no space for detailed specifications. Therefore, please approve our product specifications or transact the approval sheet for product specifications before ordering.

6. Please note that unless otherwise specified, we shall assume no responsibility whatsoever for any conflict or dispute that may occur in connection with the effect of our and/or a third party's intellectual property rights and other related rights in consideration of your use of our products and/or information described or contained in our catalogs. In this connection, no representation shall be made to the effect that any third parties are authorized to use the rights mentioned above under licenses without our consent.

7. No ozone depleting substances (ODS) under the Montreal Protocol are used in our manufacturing process.
