

TS1086

1.5A Low Dropout Positive Voltage Regulator

Low Dropout Voltage 1.5V max.

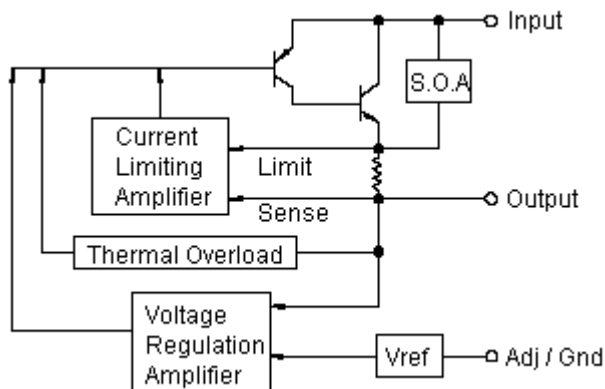

General Description

The TS1086 Series are high performance positive voltage regulators are designed for use in applications requiring low dropout performance at full rated current, Additionally, the TS1086 Series provides excellent regulation over variations due to changes in line, load and temperature. Outstanding features include low dropout performance at rated current, fast transient response, internal current limiting and thermal shutdown protection of the output device. The TS1086 Series are three terminal regulators with fixed and adjustable voltage options available in popular packages. This series is offered in 3-pin TO-263, TO-220, TO-252 and SOT-223 package.

Features

- ◇ Low dropout performance 1.5V max.
- ◇ Full current rating over line and temperature.
- ◇ Fast transient response
- ◇ $\pm 2\%$ Total output regulation over line, load and temperature
- ◇ Adjust pin current max $90 \mu A$ over temperature
- ◇ Line regulation typical 0.015%.
- ◇ Load regulation typical 0.05%.
- ◇ Fixed/adjustable output voltage
- ◇ TO-220, TO-263 TO-252 and SOT-223 package

Note 1: See thermal regulation specification for changes in output voltage due to heating effects. Line and load regulation are measured at a constant junction temperature by low duty cycle pulse testing. Load regulation is measured at the output lead = 1/18" from the package.

Note 2: Line and load regulation are guaranteed up to the maximum power dissipation of 15W. Power dissipation is determined by the input / output voltage difference and the output current. Guaranteed maximum power dissipation will not be available over the full input / output voltage range.

Note 3: Quiescent current is defined as the minimum output current required to maintain the regulation.

Typical Application Circuit

Fixed output voltage version

$$V_{out} = V_{ref} * (1 + R2 / R1)$$

* C_{in} is requested if regulator is located Far from power supply filter

** Design C_{out} as close to V_{out} pin as possible
