Description

The 'AC74 and 'ACT74 dual D-type, positive edge triggered flip-flops use ADVANCED CMOS technology. These flip-flops have independent DATA, SET, RESET, and CLOCK inputs and Q and \bar{Q} outputs. The logic level present at the data input is transferred to the output during the positive going transition of the clock pulse. \overline{SET} and \overline{RESET} are independent of the clock and are accomplished by a low level at the appropriate input.
