Film dielectric trimmers

2222 808
Ø5 mm

FEATURES

- Housing diameter 5 mm
- Top and bottom or top adjustment
- Round or hexagonal head
- Vertical version.

APPLICATIONS

- For consumer and industrial equipment.

DESCRIPTION

The vanes of the trimmer are stacked on a sturdy plastic base. The colour of the base indicates the maximum capacitance (see Tables 4, 5 and 6).

The dielectric is a film of polypropylene (PP) or polytetrafluorethylene (PTFE) for the standard versions and polycarbonate (PC) for the economic and hexagonal head versions. The dielectric supports the vanes in such a way that good stability is ensured and no microphony can occur.

Flux absorption between the vanes is prevented.

Cleaning with solvents is not advised.

For outline drawings and dimensions see Figs 1 and 2.

QUALITY LEVEL

Sampling and data evaluation for quality level in accordance with "MIL-STD-105D" and "IEC 60410":

- <0.15% major defects
- <0.65% minor defects.

Each capacitor is tested for minimum C_{\max} and is also subjected to the full test voltage.
