where I: Leakage Current (μA) at 20°C

C: Nominal Capacitance (μF)

V: Working Voltage (VDC)

6.Low Temperature Characteristics

The ratio of impedance at -25°C/20°C and -40°C/20°C of the capacitor shall be less than the following value at 120 Hz.

13.Lead Free Reflow Soldering Condition

(1)For reflow, use a thermal conduction system such as infrared radiation (IR) or hot blast.

Vapor heat transfer systems are not recommended.

(2)Observe proper soldering conditions (temperature,time,etc.). Do not exceed the specified limits.

(3)Reflow could be performed twice. Please make sure the parts have enough cooling down time between the first and second soldering process.

14.Storage Condition

- (1) Aluminium Electrolytic Capacitors should not be stored in high temperatures or where there is a high level of humidity. The suitable storage condition is 5~35°C and less than 75% in relative humidity.
- (2) Aluminium Electrolytic Capacitors should not be stored in damp conditions such as water, saltwater spray or oil spray.
- (3) Do not store Aluminium Electrolytic Capacitors in an environment full of hazardous gas (hydrogen sulfide , sulfurous acid gas, nitrous acid, chlorine gas, ammonium, etc...).
- (4) Aluminium Electrolytic Capacitors should not be stored under exposure to ozone, ultraviolet rays or radiation.
- (5) If a capacitor has been stored for more than one year under normal temperature (shorter if high temperature) and it shows increased leakage current, then a treatment by voltage application is recommended.

15.Environment-Related Substances

All Yageo capacitors comply to RoHS (Restriction of Hazardous Substances) requirements where Chromium VI (Cr⁺⁶), Cadmium (Cd), Mercury (Hg), Lead (Pb), Polybrominated biphenyls (PBBs) and Polybrominated biphenyl / diphenyl ethers (PBBEs / PBDEs) have not detected (lower than MDL (Method Detection Limit)) per SGS certification test report.

16.Others

- (1)All Yageo cp wires of electrolytic capacitors are without lead (Pb).
- (2)Satisfied characteristic JIS C 5101.
- (3)Aluminum Electrolytic Capacitors may be damaged by corrosion which is caused by any halogenated hydrocarbon solvents.
Please let us know in advance the solvent name and conditions for your PCA cleaning.
